

Compare AI tools on your own work

Asked to pick an AI tool, and every vendor claim sounds the same? The most reliable test is your own work. Run the same tasks through each tool, score them the same way, and the choice usually becomes clear within an afternoon.

ProvisoIQ does not rank AI tools and accepts no payment for placement. This sheet is for your own comparison.

How to run the comparison

1. **Pick three real tasks** you do often, such as a first-pass NDA review, a policy summary for executives and a reply to a counterparty comment. Remove confidential details first.
2. **Write one prompt per task** using the six parts in the prompt cheat sheet, and use exactly the same prompt and inputs in each tool.
3. **Run each task twice** in each tool, because answers vary between runs.
4. **Score each criterion from 1 to 3** (1 needs heavy correction, 2 usable with edits, 3 usable as is) and note the time to a usable result.
5. **Check the terms** for the plan you would actually use, with the "Safe to paste?" checklist.
6. **Decide on your scores and your terms check**, and record the date, since models change.

Scoring grid

Task: _____ Date: _____

Criterion (score 1 to 3)	Tool A	Tool B	Tool C
Accuracy against the document			
Completeness (nothing important left out)			
Follows your instructions and format			
Quotes clause numbers and the words it relies on			
Says where it is unsure			
Time to a result you can use			
Data terms suit the material (from the Safe to paste? checklist)			
Works in the apps you already use			
Cost for your plan			
Total			

Notes on what each tool got wrong: _____
